

First QUATTRO with high LO Stability.

For optimal performance and reliability in reception of Low- and High band transmissions simultaneously, as well as both Vertical- and Horizontal polarizations, SMW has designed a Quattro based on individually tested and adjusted components. The professional Quattro consists of two professional WDL PLL-LNBs and one ortho mode transducer (OMT) protected under a plastic cover.

Comes standard with high LO stability, low phase noise and low noise figure.

All our LNBs are individually hand tuned to get the very best performance available for each unit. Quality and long term reliability is also essential. Therefore are all LNBs tested according to a very extensive test program, which includes heating, cooling, water-proof testing and rigorous electrical testing.

Swedish Microwave was founded 1986 and is today a leading manufacturer of professional LNBs (Low Noise Block converters). The company is located in Motala Sweden, and to date the products are installed in more than 100 countries.

All work is in-house allowing custom-design products, short delivery times, high flexibility, quick service and support.
